

Current trail conditions on the Kekekabic Trail

As of 9/26/2022

The Kekekabic Trail Chapter of the North Country Trail Association annually organizes a number of clearing trips on various sections of the trail. Seven clearing trips were completed in 2021, despite COVID-19 and trail closures due to forest fires. Several clearing trips scheduled for May of this year were canceled due to the late Spring (snow and ice) and then due high water, some of these trips have been rescheduled for September 2022. Work will be focused on the Gabimichigami Lake, Mine Lake, and Thomas Lake sections of the trail. Details on trail conditions are noted below.

1. *The Kek is currently open **for both day and overnight use.***
2. *Permits are required year round for all overnight use.*
3. *The season switches from quota to self-issued permits on 10/1. Find all the rules and regulations at https://www.fs.usda.gov/Internet/FSE_DOCUMENTS/stelprdb5127832.pdf.*
4. *The Forest Service reduced the number of permits available at many BWCA entry points for 2022, the number of permits available for the Kek from the Snowbank and Gunflint Trail trailheads remained unchanged.*
5. *Hikers should check for the latest updates at <https://www.fs.usda.gov/superior/>.*

Current conditions:

Overall, the Kekekabic Trail / NCT is in good hiking condition, it should provide you with a great wilderness hike and experience. The Kekekabic Trail Club Chapter received numerous reports from hikers and runners from the early hiking season, this report is the most up to date information available and will be helpful as you plan your hike for 2022.

Here are things that hikers of the Kek are likely to experience trail:

- 1) Random blowdowns in places – trees are always falling.
- 2) Moderate to medium brush that obscures the tread in places, especially in the mid-to-late summer.
- 3) Beaver dam crossings – there are several spots where the Kek crosses atop beaver dams. Pay special attention to the trail and flagging in these areas.
- 4) Wet spots in the trail – including the potential for beavers flooding longer stretches of the trail – e.g. by the Bingshick-Fay portage and Seahorse Lake sections. Wet trail conditions were reported in September 2022 between Mine Lake and Howard Lake.

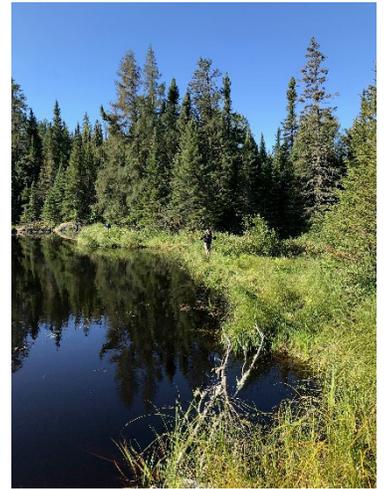

- 5) Seahorse Lake: Hikers in late September 2022 encountered several instances of water on the trail in excess of three feet in the Seahorse area.
- 6) The trail has worn tread and the trail corridor is almost always discernible. Blue flagging has been posted in areas where there might be a question on trail direction.
- 7) During the summer you will find ferns on the trail, the tread may be obscured.
- 8) The water levels after the snow melt and rain from the Spring of 2022 has returned to near-to-above normal levels for this time of year.
- 9) Trail conditions change as you enter various sections of the trail depending on the last time a crew was working in that particular area.

Specific questions on trail conditions???? Send an email to the Chapter at kek@northcountrytrail.org.

How can you help?

- 1) If you do hike the Kekekabic Trail, please take note of particular problem areas (with GPS coordinates, brief descriptions, and photos if possible) and send them to us at kek@northcountrytrail.org or share your photos on our Facebook group - facebook.com/groups/kekekabic/. *Note: If you are using the Avenza app with the NCTA-produced maps you can drop a Placemark at problem area and attach photos to the Placemark. Learn more at youtube.com/watch?v=QCDY9IcOPyE.*
- 2) Volunteer on one of the Fall clearing trips (September 2022). Send an email to: www.kek.org for more information.

Enjoy the trail!
