# **Swamper Volunteer**

North Country National Scenic Trail

#### Introduction

This National Park Service (NPS) volunteer position is based along the North Country National Scenic Trail (Trail), the longest of 11 national scenic trails stretching more than 4,600 miles from Vermont to North Dakota. The NPS volunteer is responsible for performing work associated with chainsaw and crosscut saw operations and *will not be required to perform any task that is beyond physical limits or training*. The volunteer is responsible for complying with safety policies, completing projects according to trail standards, caring and maintaining equipment, working cooperatively with others, and fostering a safe, inclusive, and positive work environment. The volunteer should coordinate projects with chapter sawyers, and/or chapter trail maintenance coordinator or chapter leadership as appropriate.\* Volunteer policy questions should be directed to the NPS volunteer program manager.

## This position requires the volunteer to read and acknowledge the <u>Personal Safety</u> and <u>Saw</u> <u>Operations</u> Job Hazard Analyses on the Volunteer Service Agreement.

Crosscut sawyer and chainsaw sawyer activities are not covered under this position. Volunteers who wish to act as a sawyer must meet all sawyer training requirements and sign up under the sawyer position description.

#### **Requirements for Swamper Volunteer Position**

If serving as the sawyer's "second person", the swamper volunteer must receive and maintain first aid and CPR certification. Training must include an in-person skills evaluation by a certified instructor. Certification must be renewed every two years.

#### **Major Duties**

- Address safety concerns and participate in safety talks at the beginning of each workday, including establishing and reviewing a 1) Safety and Emergency Response Plan, 2) site communications plan (hand signals, whistles, etc), 3) posting lookouts to secure the work zone, and 4) the role of the swamper.
- Assist sawyer with controlling the work zone and for ensuring the safety of all personnel and resources.
- Act as an extra set of eyes for the sawyer while they are operating the saw: be on the alert for others entering the work zone, unseen obstacles/hazards within the work zone, tree movement as cutting progresses, and other safety concerns.
- Ensure work is performed safely and within prescribed NPS standards.
- Follow proper safety procedures when handling tools and maintain safe distancing when working around others and equipment.
- Monitor site conditions, environmental conditions, sawyer's fatigue and mental sharpness, and crew members' fatigue throughout the day and stop work if needed.
- Assist the sawyer by helping transport, saws, fuel, tools, and other equipment to the work site.
- In consultation with the sawyer, other certified sawyers, and/or other crew members, conduct pre-operational risk assessment of project before beginning work; develop a plan to mitigate risks, and proceed only if risks and project complexity fall within the sawyer's level of certification and comfort level.
- Assist the sawyer by pulling limbs and woody debris away from the immediate work area.
- Ensure the site is "naturalized" and made safe after saw operations have been completed: collect trash and other materials; stumps and stems are flush-cut with the ground; branches, logs, and other debris moved well off the trail and dispersed; cut ends of limbs and logs pointed away from the trail as possible; remove loose hanging branches; flag any overhead hazards that cannot be safely removed.

## **Physical Demands**

- May require walking five or more miles on uneven surfaces and variable terrain. Foot travel may be along completed trail, unfinished trail, or cross-country.
- May require standing for extended periods of time
- Requires carrying full kit of tools, equipment, fuel, water, and PPE to work zones.
- Requires carrying additional personal items such as small electronic devices, food, insect repellent, etc.
- Requires physical effort in reaching, bending, turning, or moving hands, arms, feet, and legs.
- Requires lifting, carrying, pushing, and pulling up to 50 pounds on uneven surfaces.
- Requires physical effort and coordination in operating tools.

## Work Environment

Most projects will take place outside in all types of weather conditions. Weather can be unpredictable and can change quickly. The area experiences thunderstorms, high winds, rain, snow, ice, high heat, high humidity, and extreme cold. The Trail is also home to a number of insects including biting flies, mosquitos, and ticks, as well as bear, feral dogs, and other potentially dangerous animals.

## **Safety Considerations**

Safety is the number one priority! It is the individual responsibility of every volunteer to watch for hazards or unsafe operations and to call for an immediate work stop if safety is compromised. Watch out for each other; Everyone is empowered to speak up.

Work may involve walking, carrying loads over long distances, and using a variety of hand and powered tools; and frequently involves the possibility of exposure to overhead hazards, poisonous plants, blisters, bruises, muscle strains, cuts and scrapes, sunburn, and insect bites. To protect against potential hazards and serious injuries, the volunteer must follow proper safety procedures and use PPE as prescribed for projects. All injuries and near misses must be reported to Volunteer Program Manager Nic Loiseau at 616-302-9842 and the RTC\* immediately following the incident or as soon as safely possible if treatment is needed.

Each saw operation must include a "safety station" within 100 feet of the work zone that contains a first aid kit suitable for the current chainsaw operation and associated crew size, and a Safety and Emergency Response Plan.

## Personal Protective Equipment (PPE)

PPE must be worn as prescribed as described in the Job Hazard Analysis to perform assigned tasks and based on the project site, local policies, and local conditions. At a minimum, all NPS volunteer swampers must wear:

- Sturdy leather work boots
- Long pants
- Long sleeve shirt
- Hard hat (meets or exceeds ANSI Z89.1; recommended no more than five years old)
- Eye protection (meets or exceeds ANSI Z87.1)
- Hearing protection (meets or exceeds ANSI Z133.1)
- Leather, Kevlar, or similar work gloves
- Chainsaw chaps (meets or exceeds ASTM F-1897 or USFS 6170-4F), if working within 10' of running saw
- Face shield (recommended)

## **Scope of Contacts**

Volunteer will have regular contact with Trail volunteers and staff, and potential contact with trail users, landowners, partner agency staff, and the public.

## General Knowledge, Skills, and Abilities Associated with the Position

- CPR and first aid certified.
- Completion of Trail Safe! or NPS Operational Leadership training (recommended).
- Chainsaw training (recommended).
- Knowledge of Trail chainsaw policies and standard operating procedures.
- Knowledge of chainsaw functional operation and safety features.
- Skill in maintaining chainsaws, associated tools, and PPE.
- Ability to identify potential hazards, evaluate project complexity, and conduct pre-work risk assessments.
- Skill in identifying and accounting for reactive forces that exist during saw operations.
- Skill in estimating tree heights, diameter, and lean.
- Skill in identifying tree defects that my affect safe saw operations.
- Skill in employing a variety of cutting techniques to cut notches, release binds, release spring poles, and other project-specific purposes.
- Ability to hike up to five miles on various terrain and perform strenuous physical labor.
- Ability to work as part of a team.
- Ability to safely operate and maintain hand and power tools in a safe and acceptable manner.
- Ability to understand and follow oral and written instructions.
- Ability to tolerate a variety of weather and working conditions.

## **Recommended Training or Certifications**

- <u>Trail Safe!</u> online safety training or NPS Operational Leadership.
- Chainsaw training.
- Standard first aid/CPR training.
- Advanced first aid/CPR training such as Wilderness First Aid, First Responder, etc.
- Read and understand the <u>Handbook for Trail Design</u>, Construction, and Maintenance
- Watch the videos in the <u>resource center</u> on the NCTA website.
- If seeking to become a sawyer, receive on-the-job training from experienced, certified sawyers to develop knowledge, skills, and experience.

## **Personal Vehicles**

If they possess a current and valid driver's license, swamper volunteers are authorized to use their personal vehicle for the following activities:

- Towing a North Country Trail tool trailer.
- Driving from an establish centralized group meeting location to a different work site.
- Shuttling other volunteers from one worksite to another.

## Reimbursement

- Reimbursement will be provided for first aid and CPR training (reimbursable expense through NCTA).
- Swamper volunteer *may* be reimbursed for advanced first aid/CPR training (requires additional approval and is dependent on available funding).
- Volunteer will not be reimbursed for mileage, saw gas, oil, or other expenses.

### **Benefits to the Volunteer**

- Opportunity to become part of the Trail's history, and to support and contribute to nation's longest national scenic trail, the National Trail System, and the National Park Service as an official NPS volunteer.
- Volunteer is eligible for an America the Beautiful Volunteer Pass after accumulating 250 hours or more, unless they already possess an America the Beautiful Pass Senior, Assess, or Military Pass.
- Receive recognition items for hours of service.
- Training opportunities as it relates to maintaining the trail.
- Resume builder and hands-on experience.

## **Program Administration**

The North Country National Scenic Trail Volunteer-In-Parks (VIP) program is co-managed by the National Park Service and North Country Trail Association. Physical volunteer forms are kept in a locked cabinet at the NPS office in Lowell, Michigan. Electronic data is stored in Blackbaud Raiser's Edge (a platform managed by NCTA) to allow for volunteer hours and award tracking.

## **NPS Anti-Harassment Policy**

The National Park Service (NPS) is committed to providing a work environment free from discrimination and harassment based on race, color, religion, sex (including pregnancy and gender identity), sexual orientation, national origin, age, disability, family medical history (including genetic information), status as a parent, marital status, political affiliation, and one that is free from and illegal retaliation. The NPS will not tolerate offensive sexual or non-sexual harassing behavior against any NPS employee, intern, volunteer, contractor or other nonfederal employee, visitor, or other member of the public. The NPS also will not tolerate adverse treatment of employees or volunteers because they report harassment or provide information related to such complaints.

Safe behavior is considered a condition of volunteering with the NPS. Volunteers are expected to adhere to all park policies, management directives, and best practices regarding safety. Volunteers are expected to speak candidly if they are concerned about the level of risk they observe and bring any safety concerns to the volunteer program manager's attention, either directly or anonymously. Volunteers will participate in required safety trainings and fully adhere to policies and programs designed to assist them in performing work safely. Failure to follow directives related to safety may result in termination.

Additional information regarding this policy can be found in NPS Director's Order 16E, NPS Anti-Harassment Policy, that is available on the North Country Trail Association website.

# Please acknowledge that you have read and received a copy of this SWAMPER Position Description on the Volunteer Service Agreement (OF301a.)

\*Volunteers associated with a Trail affiliate should coordinate and contact leadership within their organization.

# **General Safety Topics & Hazards**

Covid-19 & Other Close	• Follow Center for Disease Control and Prevention, local, and NPS/North Country Trail Association guidance.	
Contact-Related Diseases	<ul> <li>Stay home if you are not feeling well and/or have been exposed to someone with the virus.</li> </ul>	
	<ul> <li>Wear a mask that covers both mouth and nose.</li> </ul>	
	<ul> <li>Maintain a six-foot distance from others.</li> </ul>	
	<ul> <li>If carpooling, all occupants must be masked.</li> </ul>	
	<ul> <li>Clean and disinfect vehicles, tools, and equipment before you use them. Clean tools and equipment once you finish with them.</li> </ul>	
	Clean and disinfect frequently touched objects and surfaces using generally available household cleaners or EPA registered	
	disinfectants.	
	• Avoid touching your eyes, nose, and mouth.	
	• Wash your hands often with soap and water for at least 20 seconds. When handwashing facilities are not available, use hand	
	sanitizer that contains at least 60% alcohol.	
Situational Awareness	• It is highly recommended to take Trail Safe!, a self-paced online safety training.	
	• Be aware of your surroundings, potential hazards, and the whereabouts of others.	
	• Communicate with others.	
	<ul> <li>Let other team members know when you see a hazard. Avoid working near known hazards.</li> </ul>	
	• Yell "STOP" if you see a hazard.	
	• Listen for the Alarm (L.F.T.A.) often subtle, internal warnings about unsafe acts are received before an incident occurs. Tune in	
	to this warning which is often manifested as an uneasy feeling or idea that something is wrong. This feeling is diminished when	
	we are in such a hurry or are so preoccupied that the matter distracts us from feeling different when faced with an unsafe	
	situation. Listen for the Alarm and heed the warning the first time. Slow down and remain focused on the task at hand.	
	• Step Back, Think, Organize, Proceed (STOP). Step back and consider all aspects of the task. Think about what you are about to	
	do. Organize the task and others to ensure quality of task accomplishment. Proceed in a determined effort to accomplish given	
Personal Protective	tasks in a safe manner.	
	PPE is equipment worn to minimize exposure to hazards that cause serious injuries. Examples include the following:	
Equipment (PPE)	• <u>Gloves</u> – Offer protection from hand injuries and exposure. Leather gloves should be worn while using and carrying hand tools	
	<ul> <li>and power equipment.</li> <li><u>Sturdy work boots or trail shoes</u> – Offer protection from foot injuries and exposure. Appropriate closed toe footwear is</li> </ul>	
	<ul> <li><u>Sturdy work boots or trail shoes</u> – Offer protection from foot injuries and exposure. Appropriate closed toe footwear is required: open toe shoes such as sandals are prohibited.</li> </ul>	
	required, open toe shoes such as salidais are promoted.	

	T		
	<ul> <li><u>Safety eyewear</u> – Offer protection from eye injuries. Appropriate eyewear should be worn when there is a potential for flying debris, dust, or other material hitting or getting into the eye. This includes, but not limited to, using hand and power tools, painting, and working next to vegetation. Eyewear should meet or exceed ANSI standard Z87.1.</li> </ul>		
	• <u><i>Hard hats</i></u> – Offer protection from head injuries. Hard hats should be worn when there is a possible danger of head injury from impact, falling, or flying objects.		
	• <u>Ear protection, such as ear plugs and earmuffs</u> – Offer protection from hearing loss. Wear hearing protection when operating		
	power tools and other loud equipment.		
	<ul> <li><u>High-visibility retro-reflective clothing and/or vests</u> – Bright, reflective clothing helps ensure people are notice by others when visibility is reduced or in areas where people may be distracted or otherwise not expecting/looking for others to be present. Should be worn by all volunteers, employees, and outdoor recreationalists during hunting seasons. Highly recommended for sawyers and swampers doing saw work; Should also be worn while working on or along roads, parking areas, and other hazardous areas.</li> </ul>		
Communication/	<ul> <li>Address safety concerns and conduct safety talks at the beginning of each workday, including establishing an emergency</li> </ul>		
Emergency Action Plan	action plan. At a minimum, the plan shall identify what actions will be taken in the event of an incident, who is first aid and		
	CPR certified, where first aid supplies are located, how to call for emergency assistance, and the location of the nearest		
	hospital and how to get there.		
	• Establish means of communication. Communications must be clear, concise, and understood by everyone involved.		
	• Good communication between volunteers should reinforce individual awareness of potential hazards.		
Overexertion	• Be aware of the risks of physical stress associated with physically demanding foot travel and work projects. These include, but		
	are not limited to:		
	<ul> <li>walking long distances</li> </ul>		
	<ul> <li>traversing challenging terrain</li> </ul>		
	<ul> <li>carrying heavy loads/packs</li> </ul>		
	<ul> <li>pushing/pulling loaded wagons/carts to project sites</li> </ul>		
	<ul> <li>walking through deep snow and/or with snowshoes</li> </ul>		
	• Be aware that any work project will be physically demanding if already fatigued, suffering from overexertion, suffering from		
	effects of heat, etc.		
	• Pace yourself. Start slowly and pick up the pace gradually. If your heart pounds and leaves you gasping for breath, STOP all activity, get into a cool area (or at least in shade), and rest, especially if you become lightheaded, confused, weak, or faint.		
	• Adjust to the environment. You will have greater tolerance for the heat if you limit your physical activity until you become accustomed to the heat.		
	• On hot/humid days, when completing moderate and heavy outdoor work, and when projects involve the use of machinery,		
	tasks should be assigned to the cooler parts of the day.		
	• The severity of the effects of environmental heat stress is decreased by reducing the workload, increasing the frequency and/or		
	duration of rest periods, and by introducing measures that will protect from hot environments. Take more frequent rest breaks.		
	When hot, take rest breaks in a cooled or air-conditioned building whenever possible.		
	• ALL PROJECTS CAN BE COMPLETED ANOTHER TIME. Your safety is most important.		
Site Hazards	• Look up. Look down. Look all around. Inspect the area prior to beginning any project or task to identify any site hazards		
	including, but not limited to overhead hazards, patches of noxious plants, pits/holes, dump sites, meth sites, steep banks.		
	• Point out the hazard(s) to other volunteers working in the area.		
	• Flag/fence off hazard and avoid area.		

<ul> <li>Remove objects that could impede safe operations.</li> <li>Be familiar with walking surfaces.</li> <li>Always watch your footing and be aware of wet or frozen surfaces.</li> <li>Wear footwear with good traction that matches the site conditions. Change footwear to meet site conditions, and/or use supplemental traction devices such as transpons, etc.</li> <li>endering First Aid</li> <li>Control bleeding kits and emergency first aid kits shall be available at all project sites.</li> <li>For seriously injured or ill volunteers needing advanced life support and transport, notify 911, and render first aid until a medical first responder takes over care.</li> <li>Notify the NPS volunteer program manager as soon as the injured party is safe. Complete the paperwork provided in the accident reporting kit.</li> <li>Spray clothing, exposed skin, and ankles with insect repellant as a barrier.</li> <li>Wear light colored clothing that fits tightly at the wrists, ankles, and waist. Cover trouser legs with high socks or boots.</li> <li>Avoid grassy areas if possible.</li> <li>Search clothing and the body on a regular basis, especially hair and clothing; Ticks generally do no attach for the first couple of hours.</li> <li>If a tick becomes attached, pull it by grasping it as close as possible to the point of attachment and pull straight out with gentle, constistent pressure. Wash skin with song and water. Then cleanse with rubbing alcohol. Place the tick in an empty container for later identification should you have a reaction. Record dates of exposure and removal.</li> <li>Do not try to remove the tick by burning it with a match or covering it with chemical agents.</li> <li>If you cannot remove the tick, or the head teatches, seek prompt medical help.</li> <li>Watch for warning signs of illness: a large red spot on the bite area, fever, chills, headache, joint and muscle ache, significant farigue, and facial paralysis are reactions that may appear within</li></ul>

• Apply sunscreen (SPF 15 or higher) when exposed to sun and reapply at least every two hours.	-			

Г			
	<u>Dehydration</u>		
	• Wear loose fitting clothing, preferably closely woven fabrics of light colors.		
	• Maintain adequate water intake by drinking water periodically in small amounts throughout the day (about a cup of cool water		
	every twenty minutes). Some over hydration is strongly recommended while continuing to eat throughout the day.		
	• Increase the amount of cool water and appropriate cool drinks (fruit juices and/or sports drinks) to replace sweat loss and to		
	avoid dehydration.		
	• Avoid coffee and tea which contribute to dehydration. Sugary drinks such as soda should be avoided.		
	• Carry more water than you think you will need when doing field work. The amount of water needed during a workday may		
	vary depending on duration in the field, tasks at hand, and weather.		
	Long-term heat exposure		
	• Remain aware of the four basic factors that determine the degree of heat stress: air temperature, humidity, air movement, and		
	heat radiation relative to the surrounding work environment.		
	• Know the signs and symptoms of heat exhaustion, heat cramps, and heat stroke. Heat stroke is a true medical emergency		
	requiring immediate emergency response action.		
Cold Exposure,	• Check the forecast. Cancel or postpose plans/projects in the event of extreme weather or temperatures.		
Windchill, & Snowy/Icy	• Be alert to changes in weather while outside.		
Conditions	• Wear the appropriate clothing and carry extra warm clothes.		
	• Stay well hydrated and eat high calorie foods to help maintain body heat.		
	• Watch out for ice. Wear traction devices to avoid slipping in icy conditions.		
	$\circ$ Try not to sweat or become too tired.		
	• Avoid bodies of water or becoming wet.		
	• Carefully watch for signs of cold-weather health problems, like hypothermia and frostbite.		
Lightning	• Although most common in the summer, thunder and lightning can occur anytime.		
	• Check your local weather and plan field time accordingly to avoid storms.		
	• If you can see lightning, seek shelter immediately. If you can hear thunder stop all field work and reach safety before the storm		
	hits. Use "30-30 Rule": If time between strike and thunder is less than 30 seconds, SEEK SHELTER.		
	• If caught in a storm away from your vehicle, try to find some form of enclosed building or shelter. DO NOT seek shelter under		
	large trees or in open areas. Seek shelter in low lying areas such as a ditch. Avoid high elevations, open areas, tall objects,		
	single trees, and falling tree hazards. Avoid wet ground and water sources. Sit on pack. Pile tools together and stay clear.		
	(When in groups, spread out at least 15 feet apart.)		
	• When seeking shelter in a building, make sure all windows are closed.		
	• If caught in a storm near a vehicle, return to the vehicle and stay inside while the storm is active. Park the vehicle in a low area		
	away from trees.		
	• Allow 30 minutes after last thunder before leaving shelter.		
Wildlife Encounters	• Know the wildlife in your area, where they may be, what they may be doing each season, and when they are most active.		
	Avoid places where predators are likely to be, such as berry patches and near dead animals. Know that all wild animals are		
	unpredictable.		
	• Stay alert to your surroundings. Avoid startling a predator; Where sight distance is limited or flowing water is muffling sounds,		
	make noise by singing or clapping hands. Be especially alert if hiking around dusk or dawn.		

	<u>Black bear encounters</u>		
	• DO NOT RUN! This may only instigate the bear's instinct to chase a moving target. Food, like deer or small animals, run		
	away. If you run, you look more like food to the bear.		
	• Stay calm. If you see a bear and it hasn't seen you, calmly leave the area. As you move away, talk aloud to let the bear		
	discover your presence.		
	• Back away VERY SLOWLY if the terrain allows. Bears rarely attack people unless they feel threatened or provoked.		
	• Be BIG! Place your arms over your head, lift backpacks over your head, or open your jacket wide.		
	• Don't turn your back. You should be aware of what the bear is doing.		
	• Don't make eye contact. Instead, look at the animal's front feet. You will then always know where the bear is standing and		
	what direction it is moving.		
	<ul> <li>Small children: Put them behind you or directly in front of you. This makes them look instantly larger. Teach children to</li> </ul>		
	get next to you immediately if you encounter a bear while hiking/working. NEVER let children out of your sight. Children		
	are small enough that they may be identified as prey for a bear or other predator. Make sure your children know what to		
	do if they see a bear.		
	<ul> <li>Speak softly. This may reassure the bear that no harm is meant to it. Try not to show fear.</li> </ul>		
	• If attacked, fight back. Use anything you have close to you such as rocks, sticks, binoculars, walking sticks, and your fists.		
Encounters with Illegal	• Be alert. Watch for threatening behavior from others or signs of illegal activity in an area such as dump sites, clandestine grow		
Activity	sites, etc.		
	• If you see something suspicious, gather was much information as you can without putting yourself in harm's way. Retreat to a		
	safe location immediately, write down the details that you can remember, and call 911.		
	• If you are at all uncomfortable with a situation, turn around and leave the scene immediately- abandon your equipment if		
	necessary.		
	• Volunteers shall not attempt to enforce laws or policies, investigate suspicious activity, prevent damage to land or resources, or		
	otherwise take action to confront unknown individuals engaging in inappropriate activities. This is outside of the scope of		
	volunteer service. Volunteers may provide information and attempt to educate others to protect people or resources, but take no		
	action beyond this. Do not aggravate the situation by arguing with others or trying to prevent them from continuing what they		
	are doing. Any further action shall be limited to calling 911 and retreating to a safe location as the situation warrants.		
	• Follow up with local law enforcement, NPS, and NTCA staff to report the incident.		

# **Tasks/Procedures & Hazards**

Task/Procedure & Required PPE	Potential Hazards	Recommended Actions or Procedures
Walking to/from and	Slips, trips, and falls; Twisted	• Always watch your footing and be attentive to trip hazards.
working around project	ankles and knees; Poor footing	
		<ul> <li>Plan your day so you don't have to rush over uneven terrain.</li> </ul>
site		<ul> <li>Inspect the area prior to beginning any operation.</li> </ul>
		• Remove objects that could impede safe operations.
PPE:		• Be familiar with walking surfaces.
• Sturdy work boots or trail	Struck by tools while walking	<ul> <li>Maintain safe distance/spacing while walking.</li> </ul>
shoes		$\circ$ Use tool guards, if available.

• Eye protection		• Carry tool at your side below the waist, parallel to ground, gripped at balance point behind tool head, with head forward and with sharp edge down & on down-slope side.
	Damage to eyes	<ul> <li>Do not carry tools on your shoulders or across your body.</li> <li>Watch where you walk and work, especially around trees and brush with limbs atialing out</li> </ul>
Litter collection PPE:	<ul> <li>Slips, trips, and falls</li> <li>Cuts and scraps</li> <li>Straining back, arms, or other body parts</li> <li>Contact with bodily fluids</li> <li>Contact with hazardous materials</li> </ul>	<ul> <li>sticking out.</li> <li>Be aware of surroundings and potential slipping, tripping, and falling hazards.</li> <li>Wear leather and nitrile gloves.</li> <li>Bend at the knees when lifting. Use teamwork when carrying heaving items.</li> <li>Do not overfill trash bags.</li> <li>Use long-handled tools to move objects; Don't place hands or feet where you cannot see.</li> <li>Do not place any needles directly into trash bags. Use caution when putting needles and other sharp objects in a Sharps container.</li> <li>Work from outside of dump site toward the center.</li> </ul>
	debris in dump pile; Stepping on hidden sharp objects Exposure to hazards associated with marijuana plantations, active or abandoned meth labs, etc.	<ul> <li>Keep feet on solid ground</li> <li>Wear PPE.</li> <li>Be familiar with the characteristics of meth labs/dump sites. Do not approach any suspected meth site: immediately evacuate all personnel from the site following the route you came in on and call 911.</li> <li>Be observant for things that are suspicious or out of place (trip wire strung across path, irrigation hose lays, evidence of fertilizer activity/trash, strong chemical odors, dump sites that include items such as propane tanks, acetone, shredded lithium batteries, lye/drain cleaner, coffee filters, cold medicine packages, etc.</li> <li>Immediately leave the area and call 911, then notify NPS and NCTA.</li> </ul>
	Vehicle traffic along the roadside and parking areas	<ul> <li>Wear a high visibility safety vest for all work along any roadway or parking areas.</li> <li>Face oncoming traffic.</li> <li>Look both ways before crossing the road. Use crosswalk where available. Wait for traffic to clear before crossing.</li> </ul>
Operating a motor vehicle	Exposure to possible vehicle deficiencies, or vehicle not in proper working order	<ul> <li>Conduct a safety walkaround of vehicle to inspect tire inflation, discover fluid leaks, ensure gas and oil levels, and adjust mirrors.</li> <li>Familiarize yourself with vehicle controls if you have not operated that vehicle before.</li> </ul>
	Potential motor vehicle accidents	<ul> <li>All persons operating a motor vehicle must be licensed and legal to do so.</li> <li>Never operate a vehicle under the influence of alcohol, drugs, or medication. Follow warnings on prescription medicine labels regarding the ability to drive.</li> <li>Do not attempt to drive if improperly rested.</li> <li>Always wear seat belt and shoulder harness.</li> <li>Cell phone use is prohibited while driving.</li> <li>Obey the speed limit.</li> <li>Always signal turns and lane changes.</li> </ul>

		• Maintain proper spacing and following distances from other vehicles.
		• Stop for rest breaks as necessary.
		• Secure loose objects inside the vehicle that may strike/injure you or passengers
		during emergency stopping or maneuvering.
		• Be alert to wildlife crossing roadway, particularly at dawn, dusk, after nightfall, and
		periods of increased animal movements at any time of the day (i.e. hunting and
		mating seasons).
		• Do not drive in adverse weather conditions if trip can be delayed.
Trailering	Vehicle and equipment failure	• Ensure loads do not exceed trailer rating.
		• Ensure loaded trailer does not exceed towing/braking rating of the vehicle used to tow the trailer.
PPE:		
• Leather gloves		<ul> <li>Proper tire pressure should be maintained on towing vehicle and trailer. (Recommended PSI located on side wall of tire.)</li> </ul>
• Sturdy work boots or trail		<ul> <li>Always inspect vehicle tires for any abnormal wear and tear prior to each use.</li> </ul>
shoes		<ul> <li>Hitch and electric light hookup of towing vehicle should be maintained and kept</li> </ul>
		clean. Inspect prior to each use.
		<ul> <li>Tow vehicle must have a secure place for the chains to be attached.</li> </ul>
		<ul> <li>Inspect trailer prior to each use. Check welds on trailers for cracks, trailer safety</li> </ul>
		triangle should be visible when ramp is in closed/up position, trailer license plate
		should be properly attached, and tires inspected for any abnormal wear and tear prior
		to each use.
		• Coupler, spring coupler, tongue jack, and electric light hookup should be maintained
		and kept clean and lubricated.
		• Ensure that bearings are inspected and greased as needed.
		• Spare tire(s) for both the trailer and towing vehicle and necessary tools for changing
		tires (to include adequate jacks) must be available when towing trailers.
	Injuries when	• Ensure that the tongue of the trailer is higher than the ball on the truck before backing
	connecting/disconnecting the	the truck to the trailer.
	trailer to the tow vehicle:	• Ensure that towing vehicle is not running. Minimize exposure to carbon monoxide.
	pinching fingers, crushing	• Trailer jack should always be in locked position, whether in horizontal position for
	toes, back strain, carbon	towing or in vertical position for raising and lowering trailer.
	monoxide inhalation	• Be aware of your/others' hand placement while lowering the coupler to the hitch ball.
		$\circ$ Wear gloves, work boots, and eye protection to minimize potential for severe injury.
		$\circ$ To avoid back strain, do not lift trailer. Use attached jack to raise and lower the trailer
		coupler onto the hitch ball. Never use fingers to guide hitch ball into coupler. Verify
		that the ball is the proper size for the coupler.
		• Ensure that the spring coupler is locked in down position and that a coupler lock is
		secured in place.
		• Attach safety chains properly to hitch rings. Cross the chains beneath the coupler-
		right chain to left hitch ring and left chain to right hitch ring. In the event of

	separation, the cross over may catch the tongue and prevent serious accident and trailer damage.
	$\circ$ Make sure the pin securing the ball mount to the receiver is in place.
	• Connect light plugs and make sure that all lights (brake and turn signals) are in
	working condition on trailer.
	• Avoid connecting the trailer in low light conditions. If necessary, wear a headlamp
	and get a second person to assist and do an inspection.
Personal injury and back strain	• Minimize the angle of ramp(s) as much as possible. Trailer should be on a level
when loading and uploading	surface when loading and unloading equipment.
equipment	• Ask for assistance if/when needed.
	• Ensure that the equipment is securely attached to the appropriate vehicle.
	• Before loading, check that the truck is in park and brakes are engaged on the truck.
	• Ensure proper loading on the trailer: front to back and left to right per the
	manufactures trailer manual.
	<ul> <li>Avoid attempting to load in low light conditions.</li> </ul>
Equipment weight shifting	• Inspect ratchet straps for wear and tear, fraying or cuts, and replace as needed. Do not
while traveling and tie down	use damaged straps as damaged straps may not hold during an emergency.
straps breaking or	$\circ$ The sum of the working load limits from all tie downs must be at least 50% of the
malfunctioning	weight of the cargo. (Minimum strap requirement recommended.)
	• Always carry extra ratchet straps.
	• Ensure that all ratchet straps are tight and locked down securely.
	$\circ$ Tie up any excess ratchet strap. (If an end of the strap should be run over by the tire
	of the trailer while in motion, it may result in a large jolt of the trailer, loosening of
	other straps or potential loss of the load).
	• Items other than flat loads (boards, panels, etc) must be secured at four points of
	contact: front, rear, right, and left.
	• Heavier loads may require chains and binders/tightening system.
Injury to people in path,	• Physically inspect the backing path, identifying any potential obstacles, and ensure a
hitting objects, and jackknifing	safe route.
while backing	• Use a spotter when available to help guide you and increase safety awareness while
	<ul><li>backing.</li><li>Align vehicle and trailer prior to backing. It is easier to back up a trailer in a straight</li></ul>
	line.
	<ul> <li>Avoid making sharp turns.</li> </ul>
	<ul> <li>Avoid making sharp turns.</li> <li>If you must back up the trailer at an angle, position the trailer to be backing up to the</li> </ul>
	left. (Due to the position of the driver in the towing vehicle, there is better visibility
	on trailer if it is backing to the drivers' side.)
	<ul> <li>Practice with empty trailer before towing with a load.</li> </ul>
	• There is an analy that a before to wing with a four.

Please acknowledge that you have reviewed this **PERSONAL SAFETY** hazard analysis and understand the hazards and required precautionary actions on the Volunteer Service Agreement. Please notify the volunteer program manager if you are unable to follow the requirements of this hazard analysis.

## National Park Service North Country National Scenic Trail Job Hazard Analysis

1. Work Project/Activity	2. Location	3. Originator	4. Job Title
CHAINSAW OPERATIONS*	North Country NST	Nicole Loiseau	Volunteer Program Manager
5. Name of Reviewer	6. Job Title	7. Date Prepared/Revised	8. Number of Pages in this JHA
Chris Loudenslager	Superintendent	4/28/2021	3

\*This JHA is intended for saw operators and swampers.

TASKS/PROCEDURES	HAZARDS	ABATEMENT ACTIONS
General Chainsaw Operations	Injury due to lack of training	<ul> <li>All operators must be trained, evaluated, and certified in accordance with either National Park Service or US Forest Service chainsaw policy.</li> <li>All saw operators must complete Trail Safe! or attend Operational Leadership.</li> <li>All saw operators must be trained and certified in first aid and CPR.</li> </ul>
	Delayed/no medical treatment in the event of an emergency	<ul> <li>Saw operations must have reliable primary and alternate means of emergency communications to contact 9-1-1 and/or other critical assistance at all times.</li> <li>All saw operators must work with at least one other person who is first aid and CPR certified.</li> <li>First aid station adequately equipped for the type of work and size of crew must be within 100 feet of chainsaw operations.</li> </ul>
Pre-Operation Briefing with Tailgate	Accident facilitated by unidentified hazards or poor communication	<ul> <li>Discuss operational plan, site safety plan, and emergency action plan before starting work.</li> <li>Identify roles of each person involved in operation.</li> <li>Review JHAs associated with the work to be performed.</li> <li>Identify and discuss local conditions, specialized equipment that may be used for the project, potential hazards, and how will work be conducted safely given these factors.</li> </ul>
Chainsaw Maintenance PPE:	Critical safety feature fails to prevent accident	<ul> <li>Ensure 9 critical safety features of saw are present and functional before starting saw.</li> <li>Do not use saw if any are damaged or not functioning properly.</li> </ul>
<ul><li>Eye Protection</li><li>Leather gloves</li></ul>	Poor saw performance or otherwise unsuitable equipment creates extreme reactive forces	<ul> <li>Ensure chain is sharp and depth gauges are at the proper height.</li> <li>Ensure guide bar is straight and chain groove is not flared.</li> <li>Ensure chain specs correspond with saw and guide bar.</li> </ul>

Fueling	Fire hazards from fuel spills,	• Re-fuel chainsaw in designated fueling area only.
	re-fueling a chainsaw while	• Re-fuel only when chainsaw is cool.
PPE:	hot, or defective spark	• Check spark arrestor routinely. Replace if needed.
<ul> <li>Eye protection</li> </ul>	arrestor	• Re-fuel at least 10 feet from sources of ignition (fire, smokers,
• Gloves		heaters, etc).
<ul> <li>Long sleeved shirt</li> </ul>		• Start chainsaw at least 10 feet from fueling station.
	Exposure to fuel or fumes	Tilt saw away from face and remove gas gap slowly to avoid potential
		"geyser" of pressurized fuel spray.
Saw Operations: Operator	Injury resulting from chainsaw contacting body	<ul> <li>Start chainsaw using leg-lock or ground support method only:</li> <li>"drop start" is prohibited.</li> </ul>
PPE:	part	$\circ$ Do not operate saw during periods of poor visibility, or when
$\circ$ Long pants		operator is unable to see tip of bar.
<ul> <li>Long sleeved shirt</li> </ul>		• Operator shall position his/her body out of the pathway of the
• Sturdy work boots		chainsaw, kickback, and push-back/pull-in reactive forces.
<ul> <li>Chainsaw Chaps (USFS 6 ASTM F-1897, or better)</li> </ul>	170-4F,	• Operator shall not cut materials with powerhead above shoulder height.
• Hard hat (ANSI Z89.1)		<ul> <li>Operator shall engage the chain brake when taking two or more</li> </ul>
• Eye protection (ANSI Z87	1 or better)	steps or setting saw down.
<ul> <li>Hearing protection (plugs,</li> </ul>		<ul> <li>Operator shall have two hands on the chainsaw with thumbs</li> </ul>
both)		wrapped around handles at all times during operation.
		<ul> <li>Space people so the activities of one will not create a hazard for</li> </ul>
<ul> <li>Emergency bandage</li> <li>Leather work gloves or spectrum</li> </ul>	acialty	another.
sawyer gloves (recommend		<ul> <li>Watch for overhead hazards.</li> </ul>
sawyer gloves (recomment	, j j č	<ul> <li>Always operate chainsaw uphill from log.</li> </ul>
	struck or crushed by limbs,	
	trees, and debris	• Properly assess binds/pressure before cutting.
		• Watch kerf, watch for movement, and carefully relieve tension.
		• Position body to avoid unexpected release and have a good escape route.
	Over exertion, physical	• Drink plenty of fluids and stay hydrated.
	stress, fatigue, heat	• Eat an adequate amount and bring snacks and/or a lunch to keep
	exhaustion, and/or heat	energized.
	stroke	• Maintain safe and comfortable work pace.
		• Plan operations to avoid extreme temperature, humidity, or
		demanding work when already physically stressed.
		• Take frequent breaks.
	Injury resulting from slips,	• Wear sturdy, high traction work boots.
	trips, and falls	• Exercise situational awareness.
	-	• Always carry the chainsaw on the downhill side of your body with
		the chain bar facing to the rear.
	Hearing loss cause by	Operator shall wear ear plugs, ear muffs, or both at all times while
	prolonged noise exposure	operating chainsaw.

Saw O	perations: Swamper	Back injury	<ul> <li>Use proper lifting techniques.</li> <li>Use equipment as available to assist.</li> </ul>
PPE:			<ul> <li>Ose equipment as available to assist.</li> <li>Ask for help.</li> </ul>
0	Long pants	Personal injury due to being	• Watch for overhead hazards.
0	Long sleeved shirt	struck or crushed by limbs,	• Exercise situational awareness.
0	Sturdy work boots	trees, and debris	• Position body to avoid unexpected release and have a good escape
0	Hard hat (ANSI Z89.1)		route.
0	Eye protection (ANSI Z87.1 or better)	Injury resulting from	Swamper shall maintain 10' or greater distance from a running
0	Hearing protection (plugs, muffs, or both)	chainsaw contacting body	chainsaw and not approach sawyer unless the saw is off.
	,	part	
0	Leather work gloves or specialty	Over exertion, physical	• Drink plenty of fluids and stay hydrated.
-	sawyer gloves	stress, fatigue, heat	• Eat an adequate amount and bring snacks and/or a lunch to keep
0	Emergency bandage	exhaustion, and/or/heat	energized.
		stroke	• Maintain safe and comfortable work pace.
			• Plan operations to avoid extreme temperature, humidity, or
			demanding work when already physically stressed.
			• Take frequent breaks.
		Injury resulting from Slips	• Wear sturdy, high traction work boots.
		trips and falls	<ul> <li>Exercise situational awareness.</li> </ul>
			<ul> <li>Always carry tools on your down-hill side.</li> </ul>
		Hearing loss	Swamper shall wear ear plugs, ear muffs, or both while working near
			chainsaws.

Please acknowledge that you have reviewed this **CHAINSAW OPERATIONS** hazard analysis and understand the hazards and required precautionary actions on the Volunteer Service Agreement. Please notify the volunteer program manager if you are unable to follow the requirements of this hazard analysis.
